

Just a few of the comments we've received from customers that had custom ICC profiles made:

**The prints are perfect**, everything looks like it is on the monitor. I can tell you honestly it was the best buck and a half I have spent and will recommend you to all my clients and fellow PhotoShop users.

Hi Andrew,

I just wanted to let you know **the profiles work great**. Much better than anything else I had tried. I am also glad I have read all your PDF docs and have expanded my knowledge on the subject. The Epson driver has always eluded me, now I feel much more confident.

**Amazing**, I did not know that the images contained such rich colors. Skin tones are much much! better, one could almost say real. Almost because most of the time the source is a picture from a digital camera (Nikon 950) and it is quite unclear what is real and what is a camera fault and what is printer driver/printer fault.

Thanks for the ICC profile you did for our Pictrography. **It is night and day difference!** I will refer your services to all who ask.

I finally got the profile by downloading it on a G3 at work. My initial test print looks very nice. Thank you very much.

Hi Andrew. Thank you for creating the profile. I'm very happy with the results. The first thing I printed was a 21 step gray scale, and the **neutrality is very good** for an Epson EX printer, and all the steps are clearly differentiated

We tested the custom profile produced by Digital Dog that Cadmus provided today. The files, viewed on our monitors with the custom profile, appear to match the Cadmus water proofs almost exactly. If viewed with the generic CMYK conversion, the files appear lighter and slightly warmer in color. **The new profile appears to be very accurate.**

I did a Profile to Profile printout tonight with the Pictro, following his instructions. The test file turned GREEN on the monitor when I did the Profile Conversion, BUT, it printed out perfectly. **PERFECTLY**. Neutral grey. Perfect density.

Just a note to thank you for calibrating my printer. I just couldn't believe that I waited that long with a terrible looking printer. I have been using the Epson Photo Paper (SO41141) and the results are much more than I had expected.

Images are looking better, especially the images of black people. Before, black skin tones just didn't look right...more greenish looking. Now, just auto adjust, change profile to profile, then print, for the most part.

Andrew: I can't thank you enough for your help and your patience. **I am thrilled at what I am now getting from the prints.**

The combination of your new reader and the file with more patches must have been the kicker. The results were quite dramatic. The contrast range increased quite a bit and colors that had previously dropped out came back! We are very happy with the results.

I've been doing quite a lot printing lately. The quality is exceptional. When I get goosebumps looking at a print, something is very special. Your profiles have enabled a level of print quality that I've never experienced before. Really sublime. Thank you!
